

How Anthropic teams use Claude Code

1

Data scientists building production apps

Our Data Science team built a 5,000-line React dashboard for visualizing ML model performance despite knowing “very little JavaScript.”

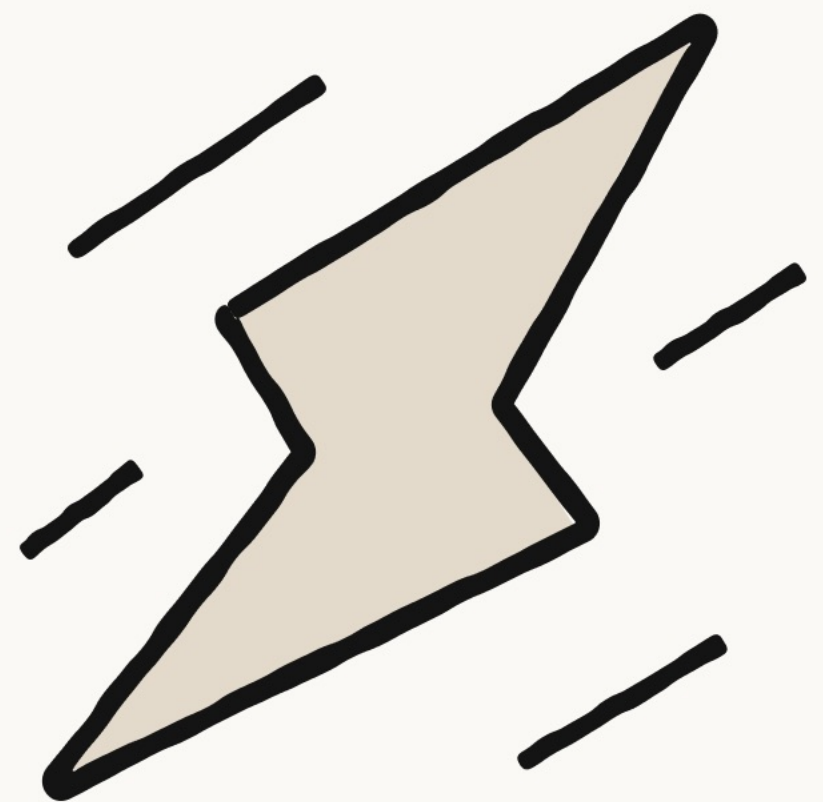

Claude Code created the entire application from scratch.

2

Infrastructure teams doing faster security reviews

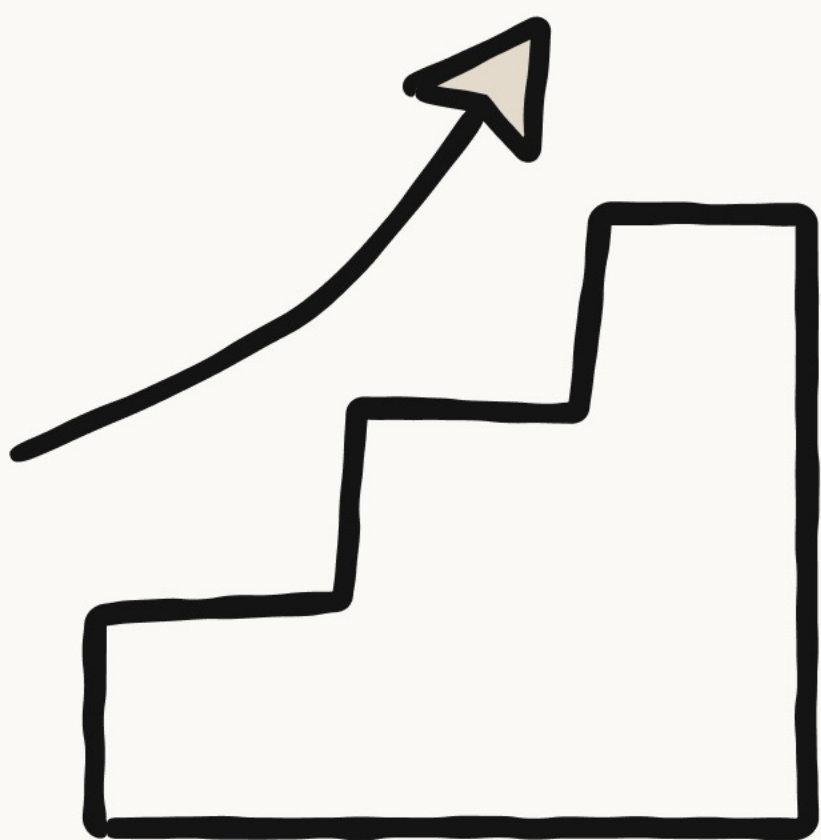

For infra changes, the Security team feeds Terraform plans to Claude Code and asks: “What’s this change going to do?”

Quick analysis of infrastructure changes means faster security approvals & no more developer bottlenecks.

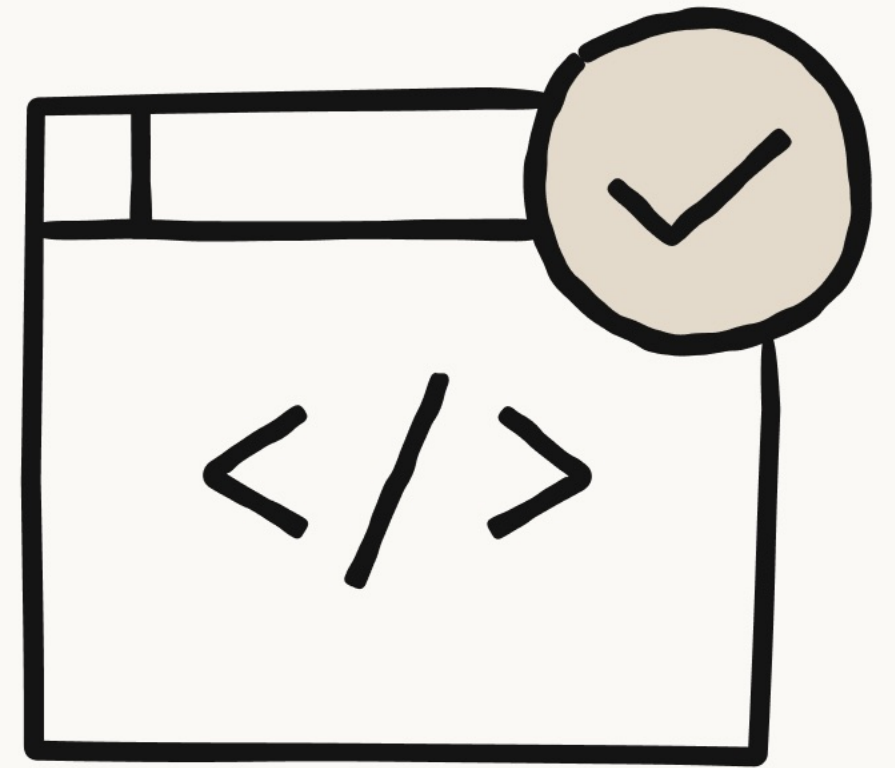

3

Growth marketers automating Google Ads

Growth Marketing automated their Google Ads workflow: Claude Code processes CSVs with hundreds of ads, identifies underperformers, and generates new variations within character limits.

4

Designers shipping code directly

Product Design now implements visual changes & state management updates themselves.

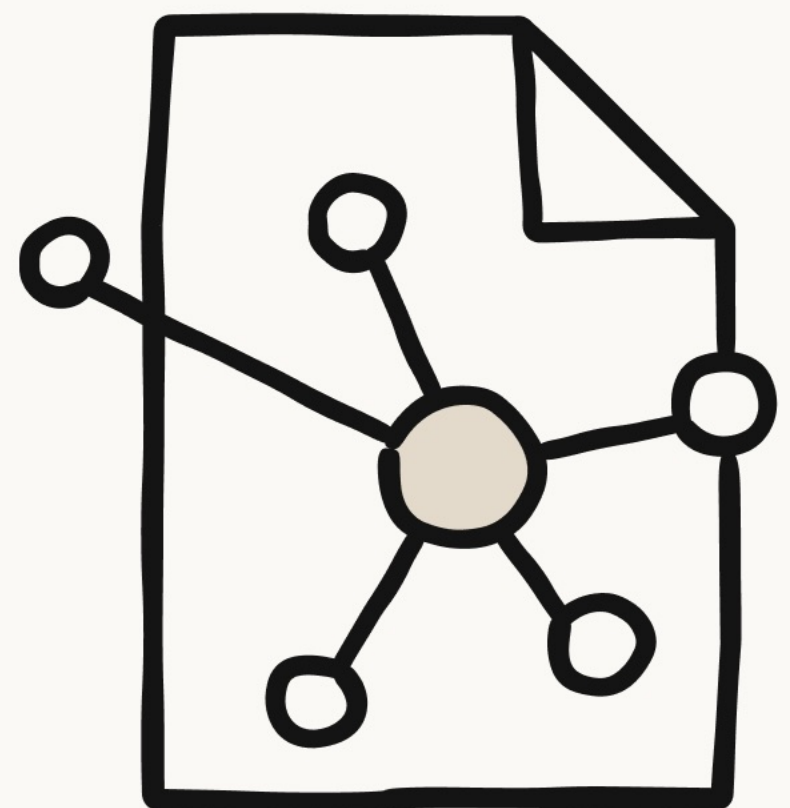

Complex projects that took a week of coordination now happen in two 30-min calls. “Claude Code is open 80% of the time alongside Figma.”

5

Finance teams automating workflows

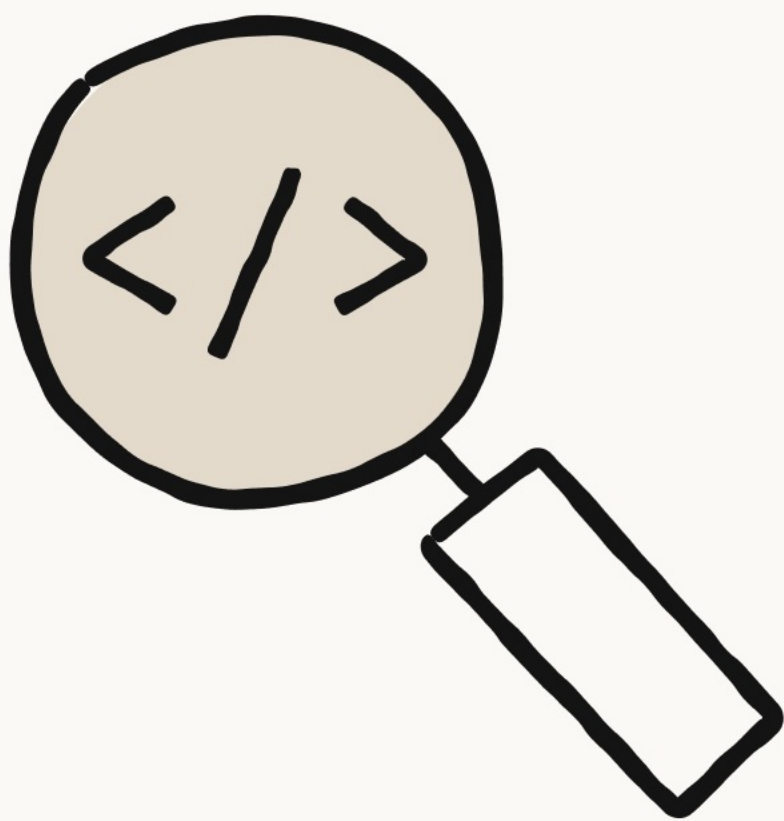

Finance staff with zero coding experience write plain text files describing their data workflows.

Claude Code executes everything: queries dashboards, runs analysis, produces Excel outputs.

6

Plus: Claude Code building Claude Code

The Claude Code team asked Claude Code to build Vim key bindings for itself. Claude autonomously implemented ~70% of the feature. The team reviewed and refined the final 30%.
